

MARIA PODIUM AND BROWSER

TECHNICAL SPECIFICATION

MARIA PODIUM AND BROWSER

Versatile podiums for storage and display

Maria is a collection of podiums with browser available in two sizes and three different heights, offering flexible interior design solutions for libraries.

The podium has a removable top plate, with a browser underneath divided into 2–4 compartments.

Perfect for creating small and large islands in the library. The simple design fits well in most spaces and makes books really stand out.

Grooved rubber mats in the display compartments ensure that even a small number of books remain stable and upright.

Use Maria podiums individually or combine them with other podiums and browsers from the Maria and Maria XL ranges. The podiums can also be used to create seating areas.

WOOD FROM RESPONSIBLE MANAGED FORESTRY AND OTHER RESPONSIBLE SOURCES

We are committed to increasing the share of responsibly sourced wooden materials in our products and thereby support responsibly forestry – for a better world.

FSC
www.fsc.org
FSC™ C144988

The mark of responsible forestry

Governments and local authorities are specifying the supply of legal and responsibly sourced wood in their procurement policies.

We have invested in a Chain-of-Custody Multi-site certificate (FSC C144988), which documents that we can offer wood from well-managed forests and other controlled sources. Forest Stewardship Council™ is an international labelling scheme that verifies that FSC-labelled products originate from responsibly managed forestry and other responsible sources.

FSC
Working with certified suppliers, we can now offer the Maria podium and browser as fully FSC Mix certified (see symbol explanation on page 3). We are continuously working on increasing the number of certified products in our portfolio. To stay informed about our environmental certifications, we recommend visiting our website regularly to access the most recent information.

What is responsibly managed forestry?
According to FSC, forests managed according to their principles and criteria promote fair conditions for workers, respect for indigenous communities and local populations, as well as strict environmental controls.

The FSC label is designed to ensure that the trees that are harvested are replaced or allowed to regenerate naturally. The FSC system also provides a traceability mechanism where wood is tracked from the forest towards the store. Every certified link between the forest and the consumer helps verify that the wood originates from responsibly managed sources.

EU ECOLABEL

EU-ECOLABELLED FURNITURE

We are pleased to add the EU Ecolabel to our preferred eco labels. The EU Ecolabel certification reflects our unwavering commitment to providing our customers with documented environmentally friendly choices.

The EU Ecolabel is an official label that complies with European legislation on sustainable actions. We present a selection of EU-ecolabelled library furniture, facilitating the choice of more sustainable and responsible solutions. The requirements are based on a life-cycle assessment of the product and requirements are imposed on production, use and disposal.

The purpose of the EU Ecolabel is to reduce the overall environmental impact from production and consumption. Therefore, the environmental label considers the entire journey of the product and the environmental issues that arise along the way.

Working with certified suppliers, we can now offer the majority of our Maria podium and browser as EU Ecolabelled (see symbol explanation on page 3). We are continuously working on increasing the number of certified products in our portfolio. To stay informed about our environmental certifications, we recommend visiting our website regularly to access the most recent information.

Why choose the EU Ecolabel?
An increasing number of businesses and individuals are conscious of the environmental footprint they leave when designing a library.

By choosing EU Ecolabel certifed products, you do not only contribute to sustainability and environmental conservation but are also assured of meeting stringent eco-friendly standards.

The EU Ecolabel ensures:
- Rigorous conditions for environmentally harmful substances.
- Specific criteria for each product type to increase the label's business relevance.
- Stringent requirements for health-hazardous substances.
- Third-party approval, ensuring the credibility of the labelling.

TECHNICAL SPECIFICATIONS

SAFETY
The browser compartments are intended for books and similar library media. The product is designed as a display and browsing unit for library environments. Users must not climb, sit, stand, hang or crawl on the product unless it has specifically been designed and tested for such use.

ASSEMBLY
The browser is delivered flat packed and must be assembled.

STABILITY
Maria is supplied with adjustable feet.

BIOCIDAL TREATMENT
No biocidal products or biocidal treatments have been intentionally applied to the finished product, including its surface. The product is not treated or marketed to provide antimicrobial, antifungal, disinfecting or preservative properties.

DENSITY
DecoBoard P2: The melamine coated chipboard is specified as Pfleiderer DecoBoard P2. DecoBoard P2 has a gross density of more than 600 kg/m^3 for boards with a thickness of 19 mm.

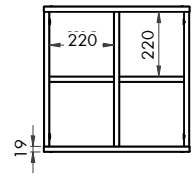

MAXIMUM LOAD
Maximum load is verified as part of the fitness-for-use assessment according to EN 16121. The declared maximum load for the top panel, browser compartments and complete unit is based on the final test report.

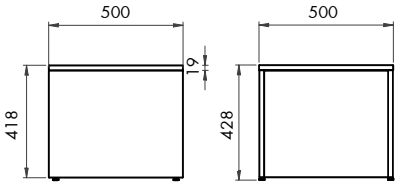

SPARE PARTS
Spare parts are available for a period of at least five (5) years from the date of delivery. Spare parts are available free of charge during the guarantee period if the product is found to be faulty during normal use, or at a proportionate cost if the product has been damaged by misuse.

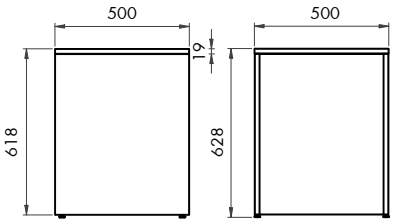

DISPOSAL
At end of life, the product should be disposed of according to local waste management regulations. The product mainly consists of melamine-coated chipboard and may generally be sorted as wood-based furniture waste where local regulations permit. Any removable metal, rubber or plastic components should be separated and sorted into the relevant waste fractions.
